Monthly Gas Utility Statistical Report

FEBRUARY 1992

Residential and electric generation sales increased while commercial and industrial sales decreased in February 1992 compared with last year. Total utility sales increased from 1,180.4 trillion Btu in February 1991 to 1,207.9 trillion Btu in February 1992. February transportation volumes to end users increased 13.7 percent compared with last year.

[1]Gas volumes are based on, and the percent change is a function of, the 69 sample companies whose sales constitute about 60% of total gas utility sales to ultimate consumers. The peak year in total sales for the gas utility industry occurred in 1972.

[2]1992 forecasts for the residential and commercial sectors are based on available 1992 monthly data with the remaining months derived by using a four year average. The industrial sector forecast (industrial only, electric generation, and transportation) is also based on available 1992 monthly data with the remaining months of 1992 heavily weighted by last year's volumes with no adjustment made for degree days.

[3]Carriage volumes determined by using a simple straight expansion of sample data to represent the total gas utility industry. Carriage volumes for ultimate consumers are volumes owned by the ultimate consumer but delivered to another transporter, not the ultimate consumer, and are therefore broken out to eliminate double counting of volumes delivered to ultimate consumers.
